Census Data

Use of Developer Fees

Site Development Costs

**Index Adjustment on the Assessment for Development –
State Allocation Board Meeting of January 22, 2014**

Annual Adjustment to School Facility Program Grants

Executive Summary

This developer fee justification study demonstrates that the Black Oak Mine Unified School District requires the full statutory impact fee to accommodate growth from development activity.

A fee of \$2.97 per square foot for residential construction and a fee of \$0.47 per square foot for commercial/industrial construction is currently assessed on applicable permits pulled in the District. The new fee amounts are \$3.36 per square foot for residential construction and \$0.54* per square foot for commercial/industrial construction. This proposed increase represents \$0.39 per square foot and \$0.07 per square foot for residential and commercial/industrial construction, respectively.

The following table shows the impacts of the new fee amounts:

Table 1
BLACK OAK MINE UNIFIED
Developer Fee Collection Rates

Totals	<u>Previous</u>	<u>New</u>	<u>Change</u>
Residential	\$2.97	\$3.36	\$0.39
Commercial/Ind.	\$0.47	\$0.54	\$0.07

*except for Industrial Parks construction where a fee of \$0.52 per square foot, Lodging construction where a fee of \$0.43 per square foot and Rental Self Storage construction where a fee of \$0.02 per square foot is justified as authorized by Education Code Section 17620

I. Background

Education Code Section 17620 allows school districts to assess fees on new residential and commercial construction within their respective boundaries. These fees can be collected without special city or county approval, to fund the construction of new school facilities necessitated by the impact of residential and commercial development activity. In addition, these fees can also be used to fund the reconstruction of school facilities or reopening schools to accommodate development-related enrollment growth. Fees are collected immediately prior to the time of the issuance of a building permit by the City or the County.

As enrollment increases, additional school facilities will be needed to house the growth in the student population. Because of the high cost associated with constructing school facilities and the District's limited budget, outside funding sources are required for future school construction. State and local funding sources for the construction and/or reconstruction of school facilities are limited.

The authority cited in Education Code Section 17620 states in part "... the governing board of any school district is authorized to levy a fee, charge, dedication or other form of requirement against any development project for the construction or reconstruction of school facilities." The legislation originally established the maximum fee rates at \$1.50 per square foot for residential construction and \$0.25 per square foot for commercial/industrial construction. Government Code Section 65995 provides for an inflationary increase in the fees every two years based on the changes in the Class B construction index. As a result of these adjustments, the fees authorized by Education Code 17620 are currently \$3.36 per square foot of residential construction and \$0.54 per square foot of commercial or industrial construction.

II. Purpose and Intent

Prior to levying developer fees, a district must demonstrate and document that a reasonable relationship exists between the need for new or reconstructed school facilities and residential, commercial and industrial development. The justification for levying fees is required to address three basic links between the need for facilities and new development. These links or nexus are:

Burden Nexus: A district must identify the number of students anticipated to be generated by residential, commercial and industrial development. In addition, the district shall identify the school facility and cost impact of these students.

Cost Nexus: A district must demonstrate that the fees to be collected from residential, commercial and industrial development will not exceed the cost of providing school facilities for the students to be generated from the development.

Benefit Nexus: A district must show that the construction or reconstruction of school facilities to be funded by the collection of developer fees will benefit the students generated by residential, commercial and industrial development.

The purpose of this report is to document if a reasonable relationship exists between residential, commercial and industrial development and the need for additional facilities in the Black Oak Mine Unified School District.

Following in this report will be figures indicating the current enrollment and the projected growth occurring within the attendance boundaries of the Black Oak Mine Unified School District. This projected growth will then be loaded into existing facilities to the extent of available space. Thereafter, the needed facilities will be determined and an estimated cost will be assigned. The cost of the facilities will then be compared to the area of residential, commercial and industrial development to determine the amount of developer fees justified.

III. Enrollment Projections

In 2013/2014 the District's total enrollment (CBEDS) was 1,357 students. The enrollment by grade level is shown here in Table 2.

Table 2

**BLACK OAK MINE UNIFIED

K-12 Total	1,357

This data will be the basis for the enrollment projections which will be presented later after a review of the development projections and the student generation factors.

Student Generation Factor

In determining the impact of new development, the District is required to show how many students will be generated from the new developments. In order to ensure that new development is paying only for the impact of those students that are being generated by new homes and businesses, the student generation factor is applied to the number of new housing units to determine development-related growth. The District may either use the local student yield rate or the State-wide average student generation factor.

The student generation factor identifies the number of students per housing unit and provides a link between residential construction projects and projections of increased enrollment. The State-wide factor used by the Office of Public School Construction is 0.70 for grades K-12. For the purposes of this report we will use the State factors to determine the students generated from new housing developments. Table 3 shows the student generation factors for the various grade groupings.

Table 3

STUDENT GENERATION FACTORS

<u>Grades</u>	<u>Students per Household</u>
K-6	0.4
7-8	0.1
9-12	0.2
Total	0.7

New Residential Development Projections

The Black Oak Mine Unified School District has experienced an average new residential construction rate of approximately 10 units per year. Projecting the average rate forward, we would expect that 50 units of residential housing will be built within the District boundaries over the next five years.

To determine the impact of residential development, an enrollment projection is done. Applying the student generation factor of 0.7 to the projected 50 units of residential housing, we expect that 35 students will be generated from the new residential construction over the next five years. This includes 20 elementary school students, 5 middle school students, and 10 high school students.

The District is required to use the development-based enrollment projection for the purposes of this study. This is utilized as the cost basis for development impact throughout this study, unless otherwise noted.

Table 4

**BLACK OAK MINE UNIFIED
 FIVE YEAR ENROLLMENT PROJECTIONS**

<u>Grades</u>	<u>Current Enrollment</u>	<u>Development Projection</u>	<u>Projected Enrollment</u>
K to 6	711	20	731
7 to 8	197	5	202
9 to 12	449	10	459
SDC	0	0	0
Totals	1,357	35	1,392

IV. Existing Facility Capacity

To determine the need for additional school facilities, the capacity of the existing facilities must be identified and compared to current and anticipated enrollments. The District's existing building capacity will be calculated using the State classroom loading standards shown in Table 6. The following types of "support-spaces" necessary for the conduct of the District's comprehensive educational program, are not included as "teaching stations," commonly known as "classrooms" to the public:

Table 5

Sample List of Core and Support Facilities

Library	Resource Specialist
Multipurpose Room	Gymnasium
Office Area	Lunch Room
Staff Workroom	P.E. Facilities

Because the District requires these types of support facilities as part of its existing facility and curriculum standards at its schools, new development's impact must not materially or adversely affect the continuance of these standards. Therefore, new development cannot require that the District house students in these integral support spaces.

Classroom Loading Standards

The following maximum classroom loading-factors are used to determine teaching-station "capacity," in accordance with the State legislation and the State School Building Program. These capacity calculations are also used in preparing and filing the baseline school capacity statement with the Office of Public School Construction.

Table 6

State Classroom Loading Standards

Kindergarten	25 Students/Classroom
1 st -3 rd Grades	25 Students/Classroom
4 th -6 th Grades	25 Students/Classroom
7 th -8 th Grades	27 Students/Classroom
9 th -12 th Grades	27 Students/Classroom

Existing Facility Capacity

The State determines the baseline capacity by either loading all permanent teaching stations plus a maximum number of portables equal to 25% of the number of permanent classrooms or by loading all permanent classrooms and only portables that are owned or have been leased for over 5 years. As allowed by law and required by the State, facility capacities are calculated by identifying the number of teaching stations at each campus. All qualified teaching stations were included in the calculation of the capacities. To account for activity and changes since the baseline was established, the student grants for new construction projects funded by OPSC have been added. Using these guidelines the District's current State calculated capacity is shown in Table 7.

Table 7

**BLACK OAK MINE UNIFIED
 Summary of Existing Facility Capacity**

<u>School Facility</u>	<u>Permanent Classrooms</u>	<u>Portable Classrooms</u>	<u>Chargable Portables</u>	<u>Total Chargable Classrooms</u>	<u>State Loading Factor</u>	<u>State Funded Projects</u>	<u>Total State Capacity</u>
Grades K-6	21	25	5	26	25	75	725

Totals	40	55	10	50		200	1,484

OPSC Funded Projects

<u>Name</u>	<u>Project #</u>	<u>K-6 Grants</u>	<u>7-8 Grants</u>	<u>9-12 Grants</u>	<u>Special Ed</u>	<u>CR</u>
Northside Elem	1	0	7	0	0	1
Golden Sierra High	2	0	0	108	0	4
Northside Elem	3	50	0	0	0	2
Georgetown Elem	4	25	0	0	0	1
Northside Elem	5	0	0	0	10	1
Totals		75	7	108	10	9

As Table 7 shows, the total State capacity of the District facilities is 1,484 students.

Unhoused Students by State Housing Standards

This next chart compares the capacity with the space needed to determine if there is available space for new students from the projected developments. The space needed was determined by reviewing the historic enrollments over the past four years along with the projected enrollment in five years to determine the maximum seats needed to house the students within the existing homes. The seats needed were determined individually for each grade grouping. The projected enrollment in this analysis did not include the impact of any new housing units.

Table 8

BLACK OAK MINE UNIFIED
Summary of Available District Capacity

<u>School Facility</u>	<u>State Capacity</u>	<u>Space Needed</u>	<u>Available Capacity</u>
Grades K-6	725	785	(60)
Grades 7-8	250	259	(9)
Grades 9-12	486	586	(100)
Special Ed	23	0	23
Totals	1,484	1,630	(146)

Since the enrollment space needed exceeds the District capacity there is no excess capacity available to house students from new development.

V. Calculation of Development's Fiscal Impact on Schools

This section of the study will demonstrate that a reasonable relationship exists between residential, commercial/industrial development and the need for additional school facilities in the Black Oak Mine Unified School District. To the extent this relationship exists, the District is justified in levying developer fees as authorized by Education Code Section 17620.

School Facility Construction Costs

For the purposes of estimating the cost of building schools we have used the State School Building Program funding allowances. These amounts are shown in Table 9. In addition to the basic construction costs, there are site acquisition costs of \$20,000 per acre and service-site, utilities, off-site and general site development costs which are also shown in Table 9.

Table 9

	<u>Bought</u>	<u>Cost/Acre</u>	<u>Land Cost</u>	<u>Cost/Acre</u>	<u>Dev. Cost</u>	<u>Development</u>	<u>Development</u>
K-6	0.33	\$20,000	\$6,667	\$213,492	\$71,164	\$34,986	\$106,150
7-8	0.13	\$20,000	\$2,500	\$200,854	\$25,107	\$10,454	\$35,561
9-12	0.27	\$20,000	\$5,333	\$234,219	\$62,458	\$18,844	\$81,303
Totals	0.73		\$14,500		\$158,729	\$64,284	\$223,013

Note: The grant amounts used are twice those shown in the appendix to represent the full cost of the facility needs and not just the standard State funding share of 50%.

Impact of Residential Development

This next table compares the development-related enrollment projection to the available district capacity for each grade level and then multiplies the unhoused students by the new school construction costs to determine the total school facility costs related to the impact of new residential housing developments.

In addition, the State provides that each District shall be reimbursed for site acquisition costs, including appraisals, surveys and title reports. The District needs to acquire 0.73 acres to meet the needs of the students projected from the new developments.

Table 10

**BLACK OAK MINE UNIFIED
 Summary of Residential Impact**

School Facility	Development Projection	Available Space	Net Unhoused	Construction Cost Per Student	Total Facility Costs
Elementary	20	0	20	\$20,198	\$403,960
Middle	5	0	5	\$21,412	\$107,060
High & Cont.	10	0	10	\$27,322	\$273,220
Site Purchase: 0.73 acres					\$14,500
Site Development:					\$223,013
			New Construction Needs:		\$1,021,753
			TOTAL NEEDS:		\$1,021,753
			Average cost per student:		\$29,193

The total need for school facilities based on the impact of the 50 new housing units projected over the next five years totals \$1,021,753. To determine the impact per square foot of residential development, this amount is divided by the total square feet of the projected developments. As calculated from the historic Developer Fee Permits, the average size home built has averaged 2,000 square feet. The total area for 50 new homes would therefore be 100,000 square feet. The total residential fee needed to be able to collect \$1,021,753 would be **\$10.22** per square foot.

Impact of Commercial/Industrial Development

There is a correlation between the growth of commercial/industrial firms/facilities within a community and the generation of school students within most business service areas. Fees for commercial/industrial can only be imposed if the residential fees will not fully mitigate the cost of providing school facilities to students from new development.

The approach utilized in this section is to apply statutory standards, U.S. Census employment statistics, and local statistics to determine the impact of future commercial/industrial development projects on the District. Many of the factors used in this analysis were taken from the U.S. Census, which remains the most complete and

authoritative source of information on the community in addition to the “1990 SanDAG Traffic Generators Report”.

Employees per Square Foot of Commercial Development

Results from a survey published by the San Diego Association of Governments “1990 San DAG Traffic Generators” are used to establish numbers of employees per square foot of building area to be anticipated in new commercial or industrial development projects. The average number of workers per 1,000 square feet of area ranges from 0.06 for Rental Self Storage to 4.79 for Standard Commercial Offices. The generation factors from that report are shown in the following table.

Table 11

Commercial/Industrial Category	Average Square Foot Per Employee	Employees Per Average Square Foot
Banks	354	0.00283
Community Shopping Centers	652	0.00153

Corporate Offices	372	0.00269
Medical Offices	234	0.00427

Source: 1990 SanDAG Traffic Generators report

Students per Employee

The number of students per employee is determined by using the 2008-2012 American Community Survey 5-Year Estimates for the District. There were 5,785 employees and 5,051 homes in the District. This represents a ratio of 1.1453 employees per home

There were 1,630 school age children attending the District in 2010. This is a ratio of 0.2818 students per employee. This ratio, however, must be reduced by including only the percentage of employees that worked in their community of residence (16.2%), because only those employees living in the District will impact the District’s school facilities with their children. The actual ratio of students per employee in the District is 0.0456.

School Facilities Cost per Student

State costs for housing commercially generated students are the same as those used for residential construction. The cost factors used to assess the impact from commercial development projects are contained in Table 11.

Residential Offset

When additional employees are generated in the District as a result of new commercial/industrial development, fees will also be charged on the residential units necessary to provide housing for the employees living in the District. To prevent a commercial or industrial development from paying for the portion of the impact that will be covered by the residential fee, this amount has been calculated and deducted from each category. The residential offset amount is calculated by multiplying the following factors together and dividing by 1,000 (to convert from cost per 1,000 square feet to cost per square foot).

- Employees per 1,000 square feet (varies from a low of 0.06 for rental self storage to a high of 4.79 for office building).
- Percentage of employees that worked in their community of residence (16.2 percent).
- Housing units per employee (0.8731). This was derived from the 2008-2012 ACS 5 Year Estimates data for the District, which indicates there were 5,051 housing units and 5,785 employees.
- Average square feet per dwelling unit (2,000).
- Residential fee charged by the District (\$3.36 per square foot).

The following table shows the calculation of the school facility costs generated by a square foot of new commercial/industrial development for each category of development.

Table 12

*Based on 1990 SanDAG Traffic Generator Report

Net Cost per Square Foot

Since the State Maximum Fee is currently \$0.54 for commercial/industrial construction, the District is justified in collecting the maximum fee for all categories with the exception of: \$0.52 per square foot of Industrial Parks construction, \$0.43 per square foot of Lodging construction and \$0.02 per square foot of Rental Self Storage construction.

Verifying the Sufficiency of the Development Impact

Education Code Section 17620 requires districts to find that fee revenues will not exceed the cost of providing school facilities to the students generated by the development paying the fees. This section shows that the fee revenues do not exceed the impact of the new development.

The total need for school facilities totals \$1,021,753. The amount the District would collect over the five year period at the maximum rate of \$3.36 for residential and \$0.54 for commercial/industrial development would be as follows:

\$3.36 x 50 homes x 2,000 sq ft per home = \$336,000 for Residential
 \$0.54 x 5,000 sq ft per year x 5 years = \$13,500 for Commercial/Industrial
 Total projected 5 year income: \$349,500

The estimated income is less than the projected needs.

District Map

The following map shows the extent of the areas for which development fees are applicable to the Black Oak Mine Unified School District.

VI. Conclusion

Based on the data contained in this study, it is found that a reasonable relationship exists between residential, commercial/industrial development and the need for additional school facilities in the Black Oak Mine Unified School District. The following three nexus tests required to show justification for levying fees have been met:

Burden Nexus: New residential development will generate an average of 0.7 K-12 grade students per unit. Because the District has exceeded its capacity, all students generated by new development will require additional school facilities.

Cost Nexus: The cost to provide new facilities is an average of \$10.22 per square foot of residential development. Each square foot of residential development will generate \$3.36 in developer fees resulting in a shortfall of \$6.86 per square foot.

Benefit Nexus: The developer fees to be collected by the Black Oak Mine Unified School District will be used for the provision of additional and reconstructed school facilities. This will benefit the students to be generated by new development by providing them with adequate educational facilities.

The reasonable relationship identified by these findings provides the required justification for the Black Oak Mine Unified School District to levy the maximum fees of \$3.36 per square foot for residential construction and \$0.54 per square foot for commercial/industrial construction, except for Industrial Parks construction where a fee of \$0.52 per square foot, Lodging construction where a fee of \$0.43 per square foot and Rental Self Storage construction where a fee of \$0.02 per square foot is justified as authorized by Education Code Section 17620.

VI. Conclusion

Based on the data contained in this study, it is found that a reasonable relationship exists between residential, commercial/industrial development and the need for additional school facilities in the Black Oak Mine Unified School District. The following three nexus tests required to show justification for levying fees have been met:

Burden Nexus: New residential development will generate an average of 0.7 K-12 grade students per unit. Because the District has exceeded its capacity, all students generated by new development will require additional school facilities.

Cost Nexus: The cost to provide new facilities is an average of \$10.22 per square foot of residential development. Each square foot of residential development will generate \$3.36 in developer fees resulting in a shortfall of \$6.86 per square foot.

Benefit Nexus: The developer fees to be collected by the Black Oak Mine Unified School District will be used for the provision of additional and reconstructed school facilities. This will benefit the students to be generated by new development by providing them with adequate educational facilities.

The reasonable relationship identified by these findings provides the required justification for the Black Oak Mine Unified School District to levy the maximum fees of \$3.36 per square foot for residential construction and \$0.54 per square foot for commercial/industrial construction, except for Industrial Parks construction where a fee of \$0.52 per square foot, Lodging construction where a fee of \$0.43 per square foot and Rental Self Storage construction where a fee of \$0.02 per square foot is justified as authorized by Education Code Section 17620.

I certify, as the District Representative, that the information reported on this form and, when applicable, the High School Attendance Area Residency Reporting Worksheet attached, is true and correct and that:

- I am designated as an authorized district representative by the governing board of the district.
- If the district is requesting an augmentation in the enrollment projection pursuant to Regulation Section 1859.42.1 (a), the local planning commission or approval authority has approved the tentative subdivision map used for augmentation of the enrollment and the district has identified dwelling units in that map to be contracted. All subdivision maps used for augmentation of enrollment are available at the district for review by the Office of Public School Construction (OPSC).
- This form is an exact duplicate (verbatim) of the form provided by the Office of Public School Construction. In the event a conflict should exist, then the language in the OPSC form will prevail.

2008-2012 American Community Survey 5-Year Estimates

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Data and Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.

Vehicles available	(X)	(X)	(X)

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

Foreign born excludes people born outside the United States to a parent who is a U.S. citizen.

Workers include members of the Armed Forces and civilians who were at work last week.

Industry codes are 4-digit codes and are based on the North American Industry Classification System 2007. The Industry categories adhere to the guidelines issued in Clarification Memorandum No. 2, "NAICS Alternate Aggregation Structure for Use By U.S. Statistical Agencies," issued by the Office of Management and Budget.

While the 2008-2012 American Community Survey (ACS) data generally reflect the December 2009 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2000 data. Boundaries for urban areas have not been updated since Census 2000. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Source: U.S. Census Bureau, 2008-2012 American Community Survey

Explanation of Symbols:

1. An *** entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.

2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

The median gross rent excludes no cash renters.

In prior years, the universe included all owner-occupied units with a mortgage. It is now restricted to include only those units where SMOCAPI is computed, that is, SMOC and household income are valid values.

In prior years, the universe included all owner-occupied units without a mortgage. It is now restricted to include only those units where SMOCAPI is computed, that is, SMOC and household income are valid values.

In prior years, the universe included all renter-occupied units. It is now restricted to include only those units where GRAPI is computed, that is, gross rent and household Income are valid values.

The 2007, 2008, 2009, 2010, 2011, and 2012 plumbing data for Puerto Rico will not be shown. Research indicates that the questions on plumbing facilities that were introduced in 2008 in the stateside American Community Survey and the 2008 Puerto Rico Community Survey may not have been appropriate for Puerto Rico.

Median calculations for base table sourcing VAL, MHC, SMOC, and TAX should exclude zero values.

Telephone service data are not available for certain geographic areas due to problems with data collection. See Errata Note #93 for details.

While the 2008-2012 American Community Survey (ACS) data generally reflect the December 2009 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2000 data. Boundaries for urban areas have not been updated since Census 2000. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

While the 2008-2012 American Community Survey (ACS) data generally reflect the December 2009 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2000 data. Boundaries for urban areas have not been updated since Census 2000. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '***' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

Use of Developer Fees:

A School District can use the revenue collected on residential and commercial/industrial construction for the purposes listed below:

- Purchase or lease of interim school facilities to house students generated by new development pending the construction of permanent facilities.
- Purchase or lease of land for school facilities for such students.
- Acquisition of school facilities for such students, including:
 - Construction
 - Modernization/reconstruction
 - Architectural and engineering costs
 - Permits and plan checking
 - Testing and inspection
 - Furniture, Equipment and Technology for use in school facilities
- Legal and other administrative costs related to the provision of such new facilities
- Administration of the collection of, and justification for, such fees, and
- Any other purpose arising from the process of providing facilities for students generated by new development.

Following is an excerpt from the Education Code that states the valid uses of the Level 1 developer fees. It refers to construction and reconstruction. The term reconstruction was originally used in the Leroy Greene program. The term modernization is currently used in the 1998 State Building Program and represents the same scope of work used in the original reconstruction projects.

Ed Code Section 17620. (a) (1) The governing board of any school district is authorized to levy a fee, charge, dedication, or other requirement against any construction within the boundaries of the district, for the purpose of funding the construction or reconstruction of school facilities, subject to any limitations set forth in Chapter 4.9 (commencing with Section 65995) of Division 1 of Title 7 of the Government Code. This fee, charge, dedication, or other requirement may be applied to construction only as follows: ...

The limitations referred to in this text describe the maximum amounts that can be charged for residential and commercial/industrial projects and any projects that qualify for exemptions. They do not limit the use of the funds received.

REPORT OF THE EXECUTIVE OFFICER
State Allocation Board Meeting, January 22, 2014

INDEX ADJUSTMENT ON THE ASSESSMENT FOR DEVELOPMENT

PURPOSE OF REPORT

To report the index adjustment on the assessment for development which may be levied pursuant to Education Code Section 17620.

DESCRIPTION

The law requires the maximum assessment for development be adjusted every two years by the change in the Class B construction cost index, as determined by the State Allocation Board (Board) at its January meeting. This item requests that the Board make the adjustment it considers appropriate.

AUTHORITY

Education Code Section 17620(a)(1) states the following: "The governing board of any school district is authorized to levy a fee, charge, dedication, or other requirement against any construction within the boundaries of the district, for the purpose of funding the construction or reconstruction of school facilities, subject to any limitations set forth in Chapter 4.9 (commencing with Section 65995) of Division 1 of Title 7 of the Government Code."

Government Code Section 65995(b)(3) states the following: "The amount of the limits set forth in paragraphs (1) and (2) shall be increased in 2000, and every two years thereafter, according to the adjustment for inflation set forth in the statewide cost index for class B construction, as determined by the State Allocation Board at its January meeting, which increase shall be effective as of the date of that meeting."

BACKGROUND

There are three levels that may be levied for developer's fees. The fees are levied on a per-square foot basis. The lowest fee, Level I, is assessed if the district conducts a Justification Study that establishes the connection between the development coming into the district and the assessment of fees to pay for the cost of the facilities needed to house future students. The Level II fee is assessed if a district makes a timely application to the Board for new construction funding, conducts a School Facility Needs Analysis pursuant to Government Code Section 65995.6, and satisfies at least two of the requirements listed in Government Code Section 65995.5(b)(3). The Level III fee is assessed when State bond funds are exhausted; the district may impose a developer's fee up to 100 percent of the School Facility Program new construction project cost.

In 2010, the Board did not adjust the fee because the Class B construction index had decreased, which kept it at the 2008 rate of \$2.97 per square foot for Residential and \$.47 per square foot for Commercial/Industrial. In 2012, the Board approved an increase based on the change in the Class B construction index according to the Marshall & Swift (M&S) Eight California Cities Index.

STAFF ANALYSIS/STATEMENTS

The assessment for development fees for 2008, 2010, 2012 and 2014 are shown below for information. According to the M&S Eight California Cities Index and Ten Western States Index and the Lee Saylor Index, the cost index for Class B construction increased by 4.93, 5.38 and 2.13 percent respectively during the period of January 2012 through December 2013, requiring the assessment for development fees to be adjusted as follows beginning January 2014:

Eight California Cities Index Maximum Level I Assessment Per Square Foot

	<u>2008</u>	<u>2010</u>	<u>2012</u>	<u>2014</u>
Residential	\$2.97	\$2.96	\$3.20	\$3.36
Commercial/Industrial	\$0.47	\$0.47	\$0.51	\$0.54

Ten Western States Index Maximum Level I Assessment Per Square Foot

	<u>2008</u>	<u>2010</u>	<u>2012</u>	<u>2014</u>
Residential	\$2.97	\$3.00	\$3.20	\$3.37
Commercial/Industrial	\$0.47	\$0.47	\$0.50	\$0.53

Lee Saylor Index Maximum Level I Assessment Per Square Foot

	<u>2008</u>	<u>2010</u>	<u>2012</u>	<u>2014</u>
Residential	\$2.86	\$2.98	\$3.14	\$3.21
Commercial/Industrial	\$0.46	\$0.48	\$0.51	\$0.52

The M&S Eight California Cities Index fits most appropriately for the construction projects in California. Additionally, it will provide more assessment collection to school districts than the alternate indices.

RECOMMENDATION

Increase the 2014 maximum Level I assessment for development in the amount of 4.93 percent using the M&S Eight California Cities Index to be effective immediately.
